

## **CUSTOM FABRIC FINISHES**

### ***Bio-AM™***

Nano-Tex® with Bio-AM™ provides high-performance spill and stain resistance with a non-leaching antimicrobial that controls the microorganisms that cause odors and stains.

### ***CRYPTON®***

Crypton® is the only textile solution offering permanent protection against stains, moisture, mildew, bacteria, and odors. The formula is better for the environment and meets Crypton® standards for extreme durability and long-term performance. Crypton® technologies are GREENGUARD Gold Select Certified.

### ***INCASE™***

InCase™ is perfect when you need your fabric to be resistant to spills, stains, odors, and microbes but do not require a moisture barrier. It provides multiple levels of fabric protection through advanced, environmentally friendly formulations and Silver Ion Technology. InCase™ is GREENGUARD Gold Certified and will pass most FR requirements. (CAL 133, Boston Fire Code, IMO, Crib 5.)

### ***DURABLOCK®***

Formerly called NANOBLOK + NANO-TEX, DuraBlock® is a liquid barrier (backing) that can be combined with Nano-Tex® for added performance. Even under high pressure, no liquid can travel through the backing into the cushion.

### ***ENVIROSEAL®***

Nano-Tex® with EnviroSeal® is designed to aggressively repel liquids and stains. The finish dramatically improves a fabric's durability and meets the requirements for MBDC Cradle to Cradle certification.

### ***ENVIROCOAT®***

EnviroCoat® is a 100% polyester coating that is laminated to the back of a fabric, creating a fabric that repels liquids and stains. It is intended to replace acrylic and latex backings, is 100% recyclable, and meets the requirements for MBDC Cradle to Cradle certification.

### ***GREENSHIELD®***

Greenshield® is a technology that attaches tiny nanoparticles to fabric to help create moisture and stain resistance. This process uses far fewer fluorocarbons than similar fabric finishing. Greenshield® is chemically bonded to any fabric that can withstand 250 degrees Fahrenheit washing, and it lasts the life of the fabric.

### ***NANO-TEX®***

Nano-Tex® is high-performance nanotechnology that builds permanent stain protection into the molecular structure of the fabric by covalently bonding to the fibers of the textile. It lasts the life of the fabric and is effective at preventing fabric stains from dirt and spills including coffee, soda, wine, mustard, salad dressing, blood, urine, and iodine.
